Service request:

John Reed is now appointed as the manager of the Employee's group; kindly configure the roles and responsibilities. Everything is already approved and checked by HR.

Environment: DC01 (domain controller) and CLIENT01 (Windows client)

1. Issue Description

Configure John' Reed account as the manager of the Employee's group, providing all the necessary permission he will be required to gain access of the group.

2. Environment

- User account: AKLAB\john.reed
- Shared resource: \\DC01\CompanyShare\Employees

3. Resolution

Finding John Reed under the Active Directory Users and Computers:

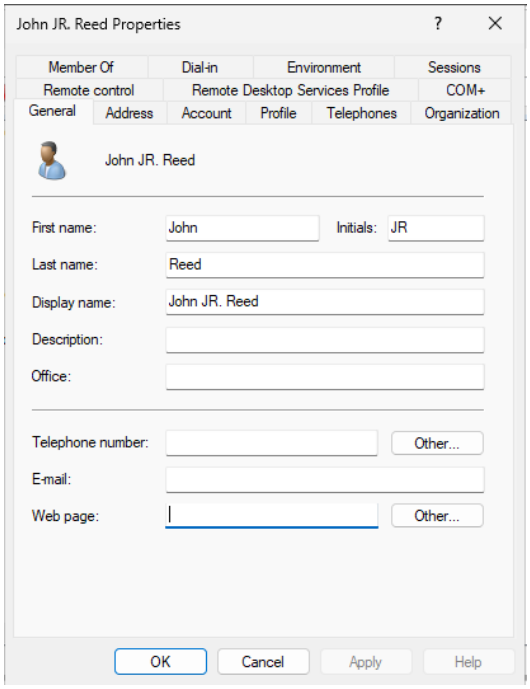

Figure 1: John JR. Reed Properties

Providing the membership GG_Managers:

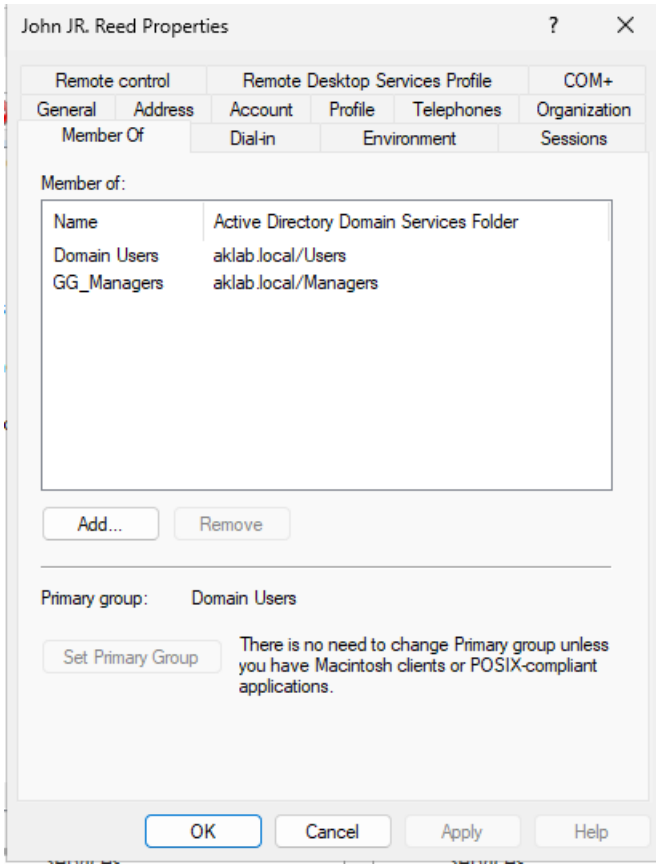

Figure 2: John Reed is now a member of GG_Managers

Changing the job title for John Reed:

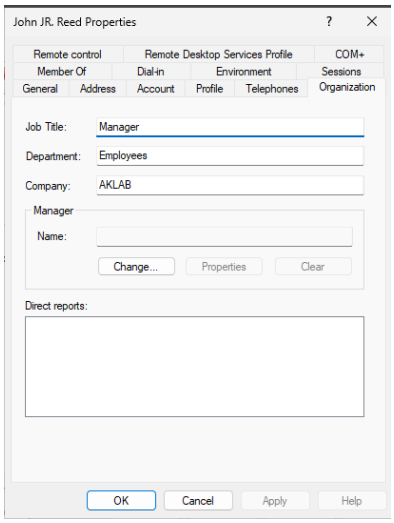

Figure 3: John Reed's job title is set to Manager

Assigning the members of Employees group a manager, here assigning a manager to Jamie Taylor.

The issues are arising when trying to assign a manager to Jamie Taylor, therefore by navigating to Active Directory Users and Computers >

Opening Jamie Taylor's properties > Attribute Editor > Manager

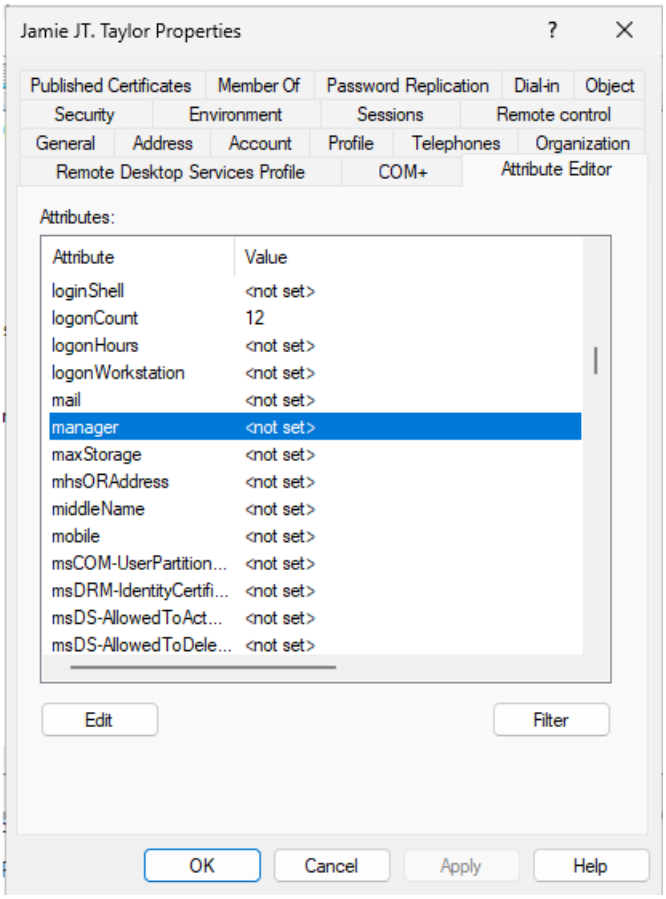

Figure 4: Selecting the manager attribute

Assigning the value which was copied from the John Reed account:

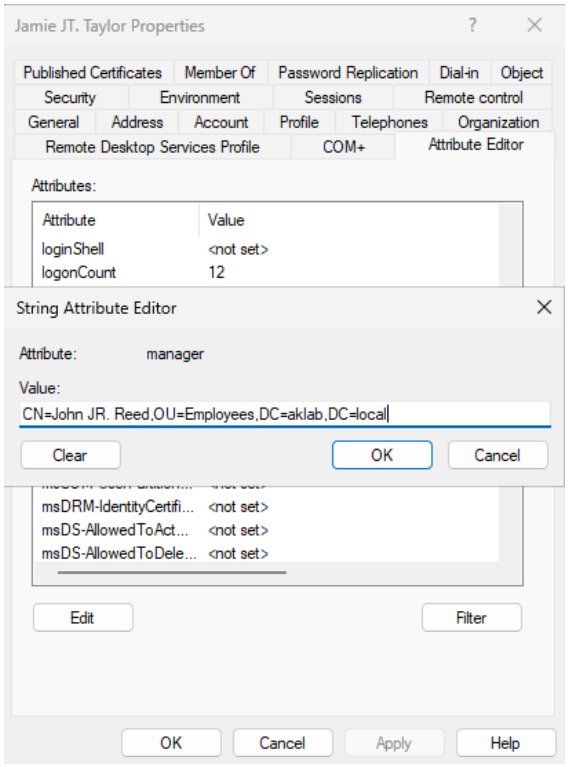

Figure 5: Editing the value

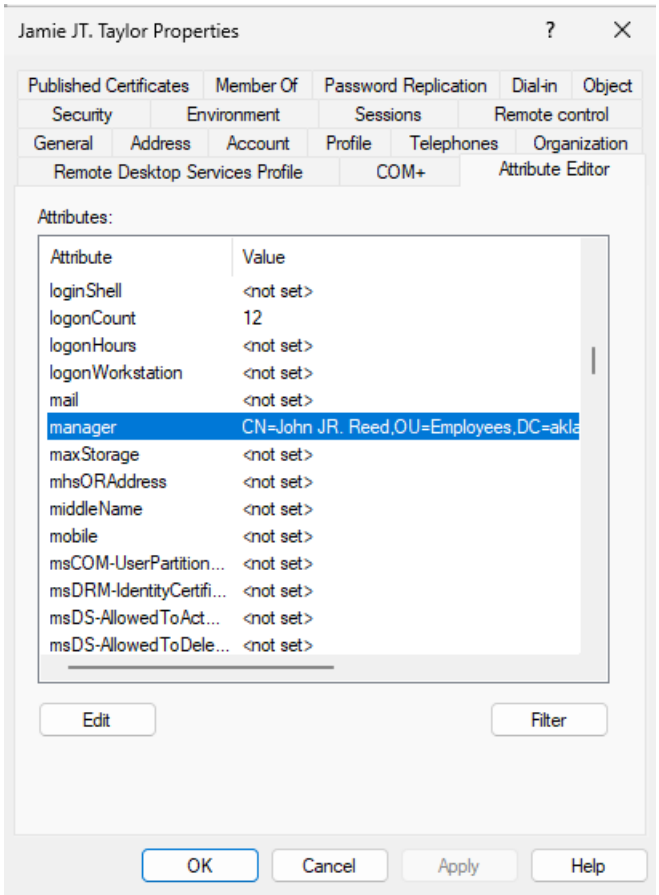

Figure 6: Applying the settings

4. Validation

Under Jamie JT. Taylor Properties > Organization tab, we can see that John Reed is assigned as the manager successfully.

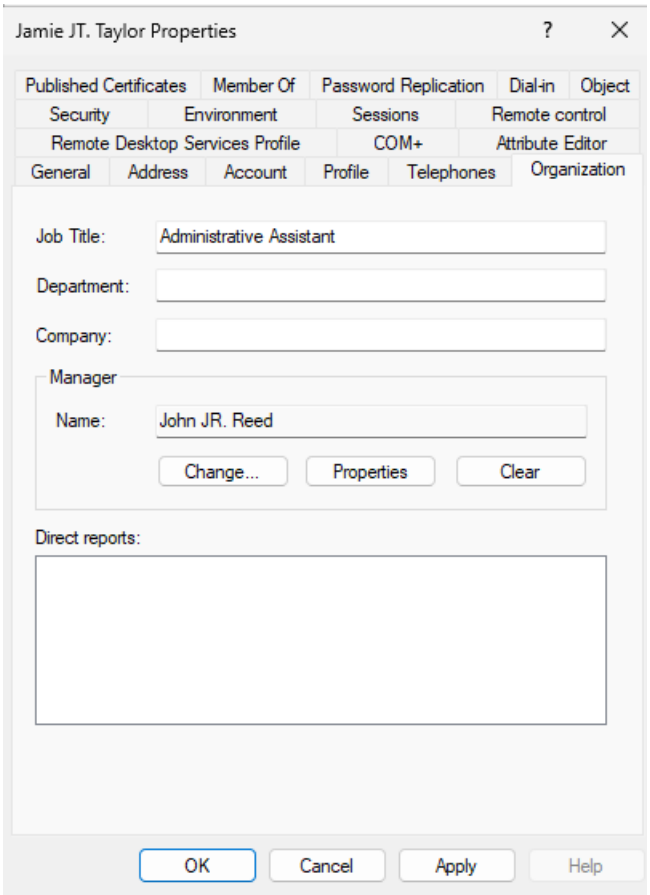

Figure 7: John Reed is successfully assigned as the manager of Jamie Taylor.

Ticket Resolved!
