HD-013

Critical

Affected User

John Smith

Domain

aklab.local

Issue:

My account has been locked out, and it displays the message “The reference account is currently locked out and may not be logged in”. I am aware of the new account lockout policy, but I didn’t make any login attempts. I believe somebody else is trying to gain access to my account.

Environment: DC01 (domain controller) and CLIENT01 (Windows client)

1. Issue Description

The user is facing a security issue in which he didn’t try to attempt any logons but still the account is locked out, which indicates that there might be a threat.

2. Environment

- User account: AKLAB\john.smith
- Shared resource: N/A

3. Resolution

Resetting the password for John Smith, so that if the password might be exposed to the hacker, he won’t be able to use it:

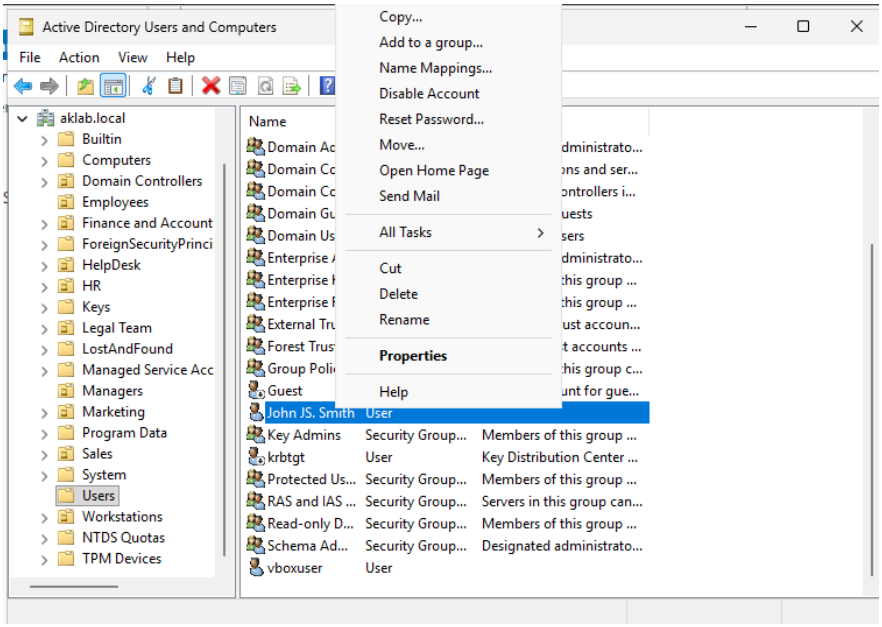

Figure 1: Opening settings to Reset Password

Setting the new password and settings for after logon:

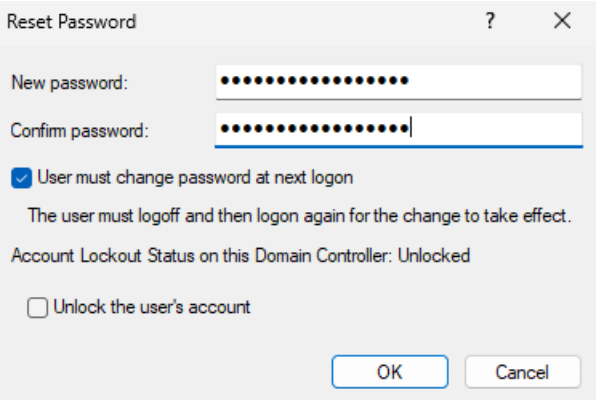

Figure 2: Configuring the password

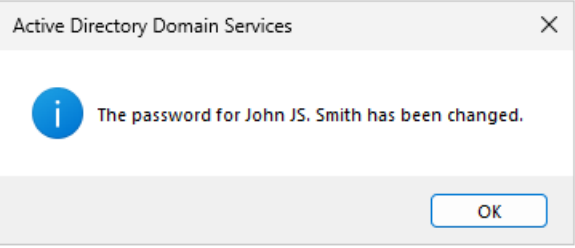

Figure 3: The password has successfully changed

Running a security scan remotely, although the password has been reset and the security scan has been performed, doesn't erase the security concern. Therefore, escalating this ticket to the security team.

6. Validation

Asking the user to try to log in with the new password and set it up:

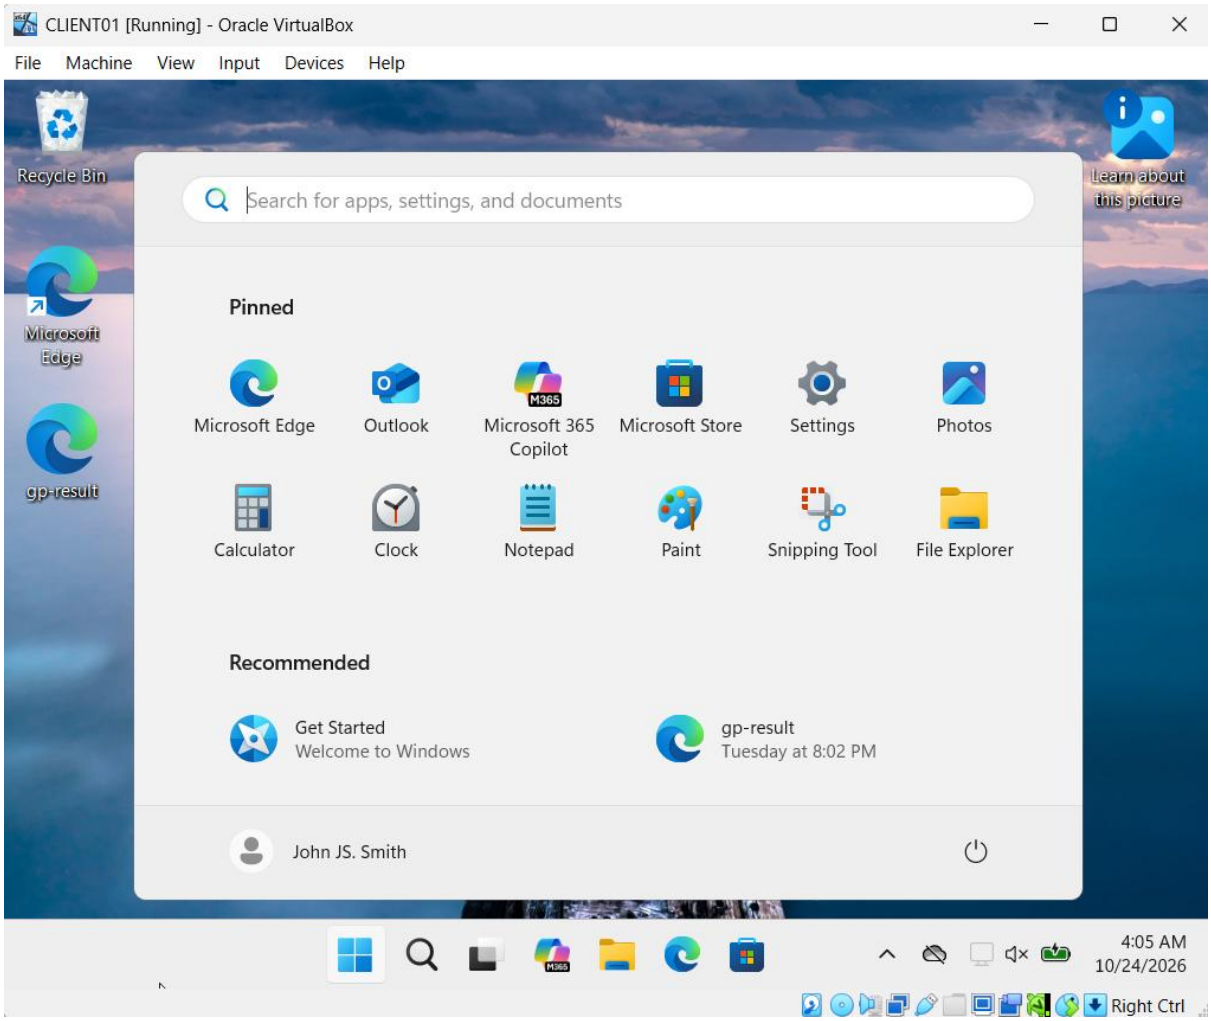

Figure 4: The user is logged in

Ticket Escalated to the Security Team!
