HD-018

Medium

Affected User

John Smith | Backup Operator

Domain

aklab.local

Issue:

The IT Administrator has requested a dedicated folder for the Backup Operator account to store and manage files required for backup operations.

Environment: DC01 (domain controller) and CLIENT01 (Windows client)

1. Issue Description

The IT Administrator has requested a dedicated folder for the Backup Operator account to store and manage files required for backup operations. Currently, the Backup Operator requires an appropriate storage location to organize backup-related files without accessing unnecessary employee data or other restricted folders.

2. Environment

- User account: AKLAB\john.smith
- Shared resource: \\DC01\CompanyShare

3. Resolution

Let's create a folder inside CompanyShare:

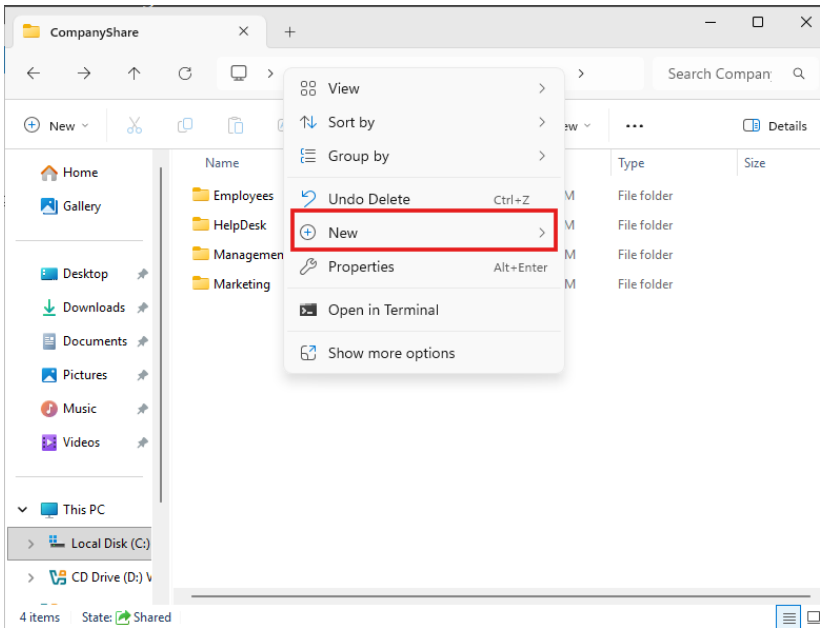

Figure 1: Creating a new folder

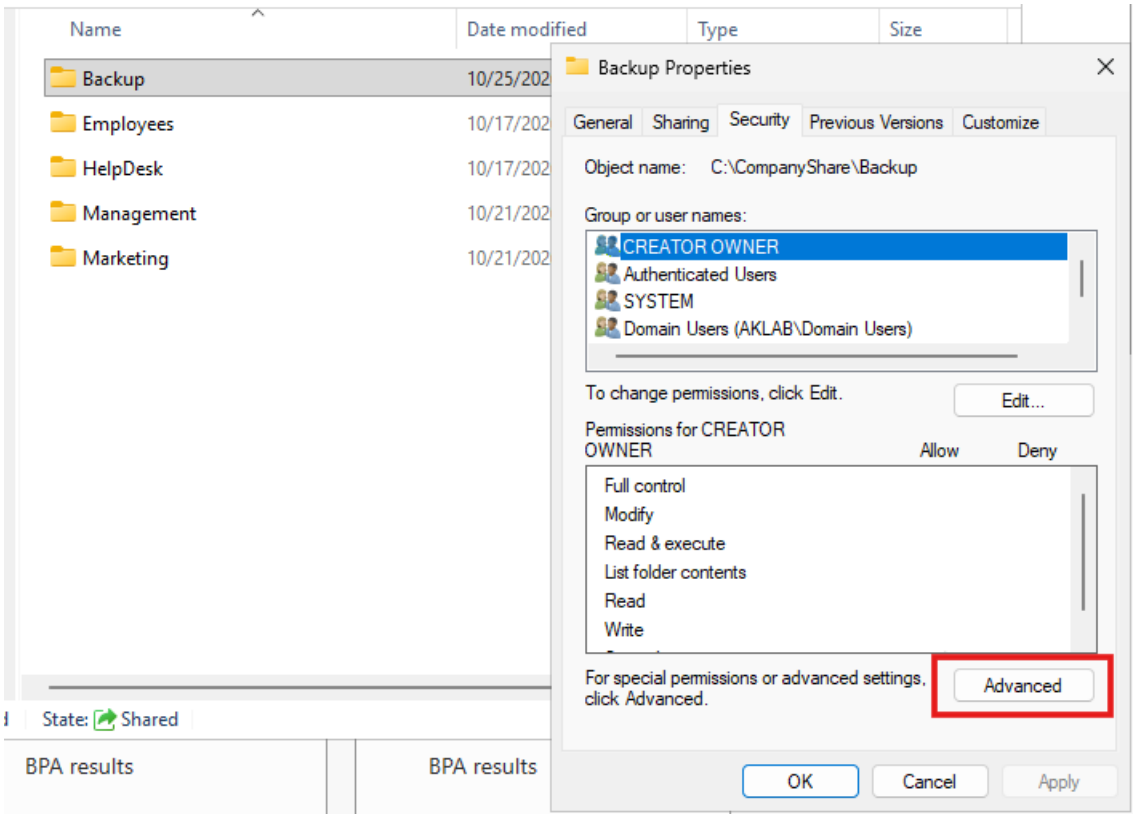

Figure 2: Backup folder is created

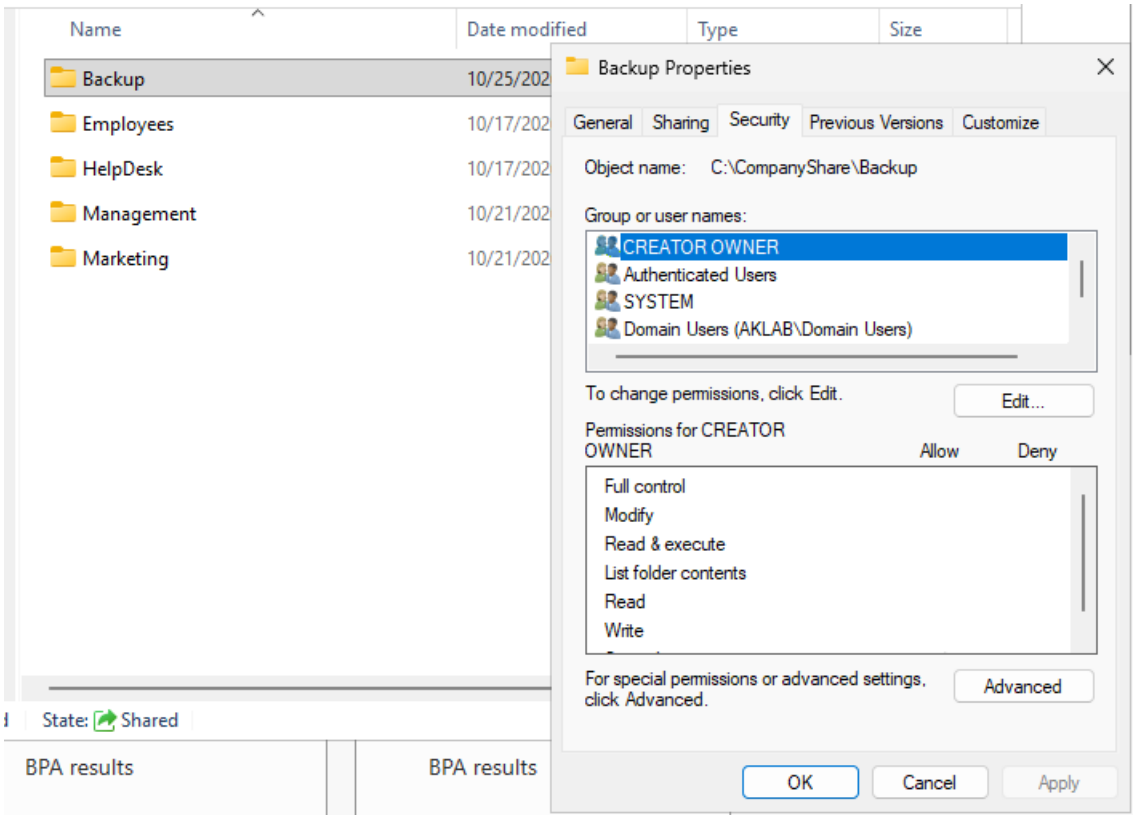

Figure 3: Security settings for the folder from the Advanced tab

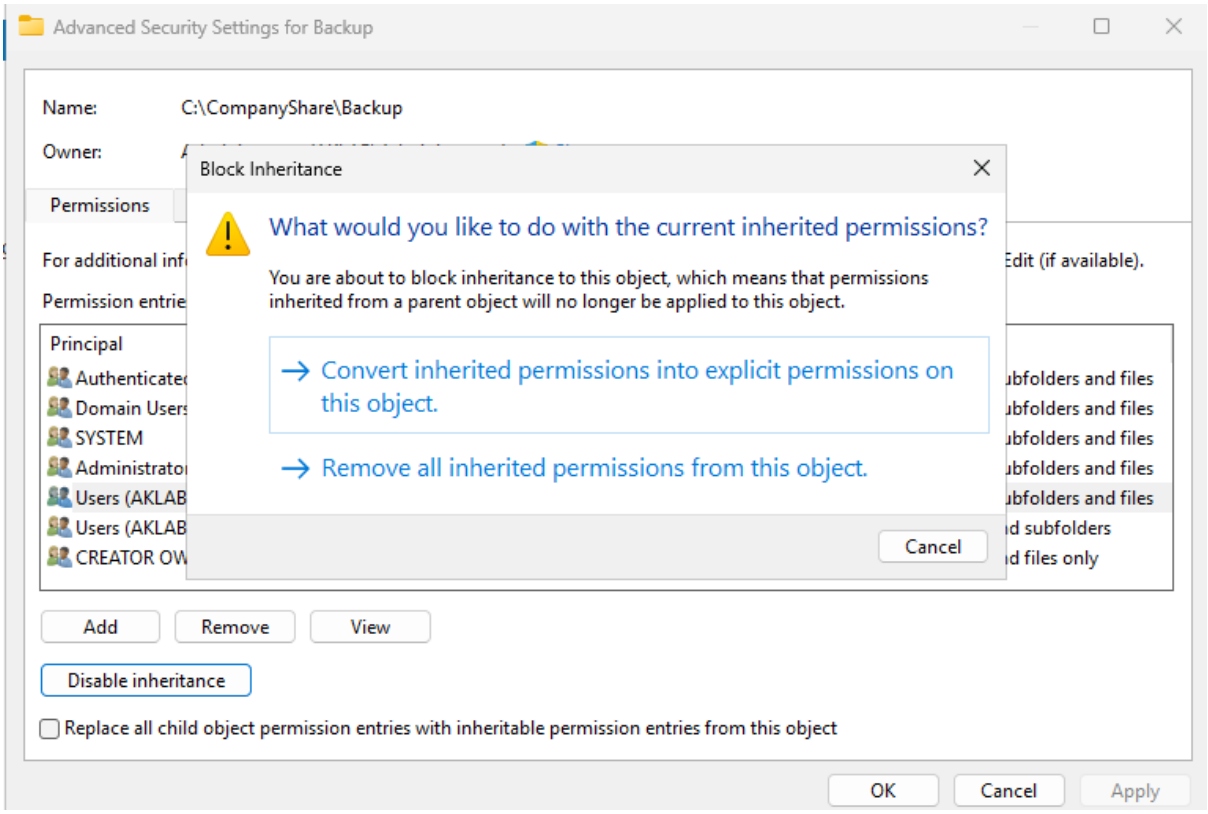

Figure 4: Setting up the inheritance settings

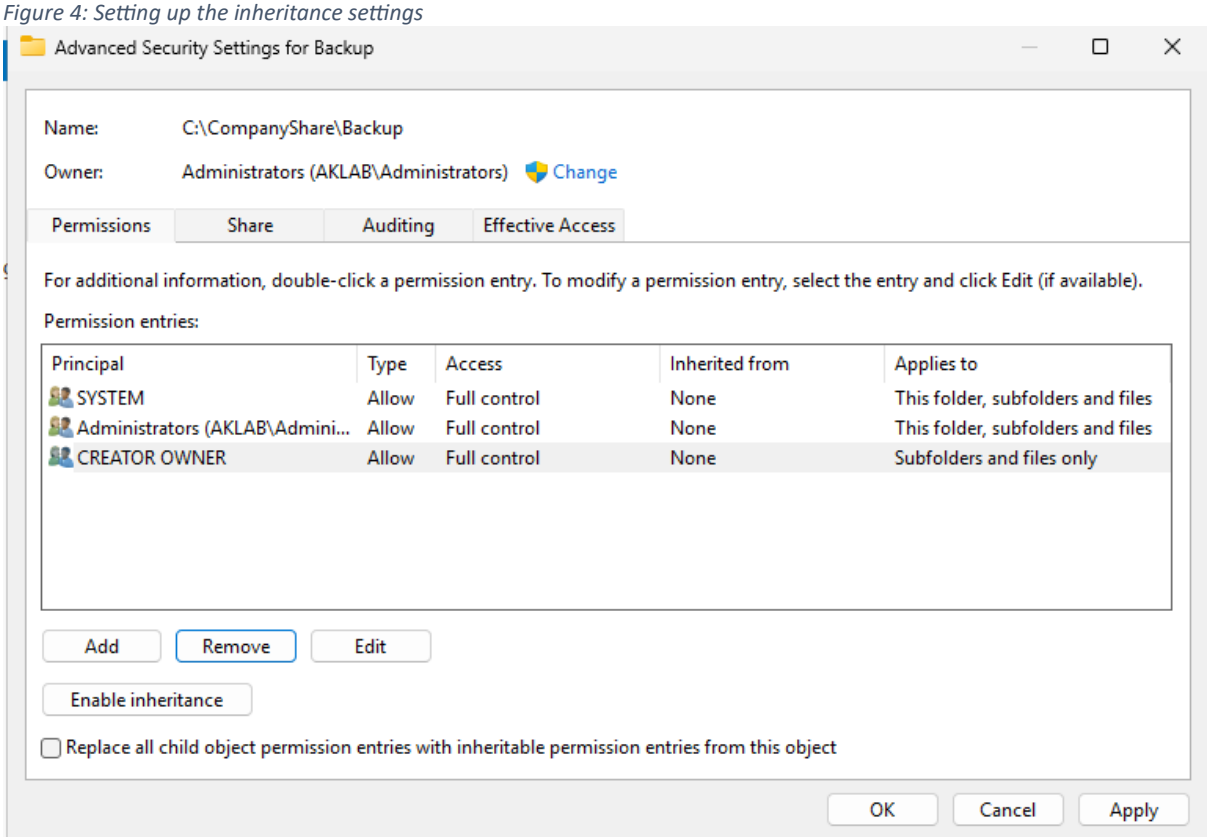

Figure 5: Removed unnecessary settings

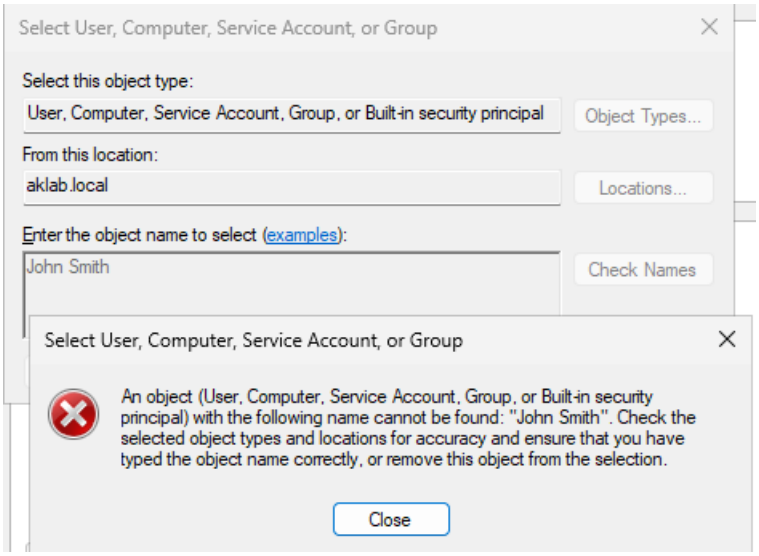

Figure 6: Checking names

Failed to find a user with the name 'John Smith'.

Let's try again using just the name John:

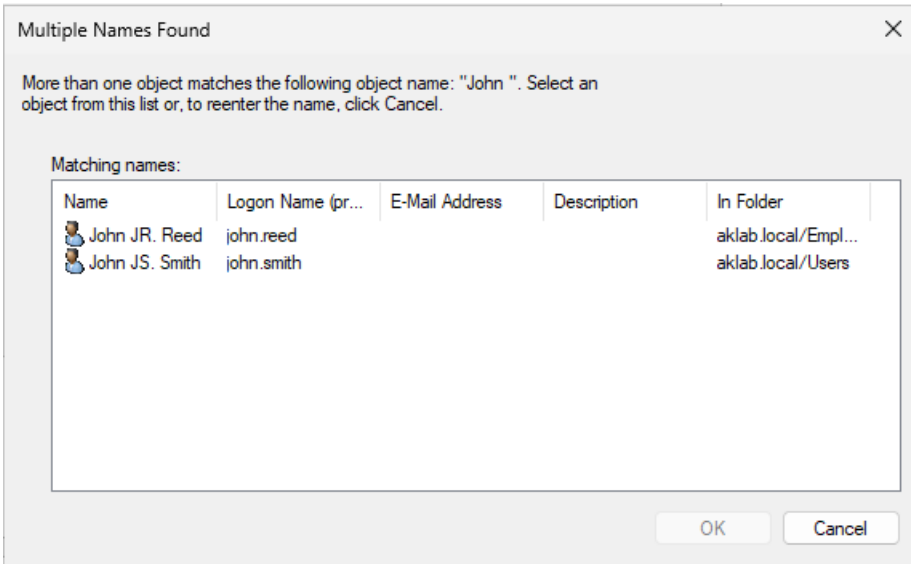

Figure 7: Two users listed using the name searc 'John'

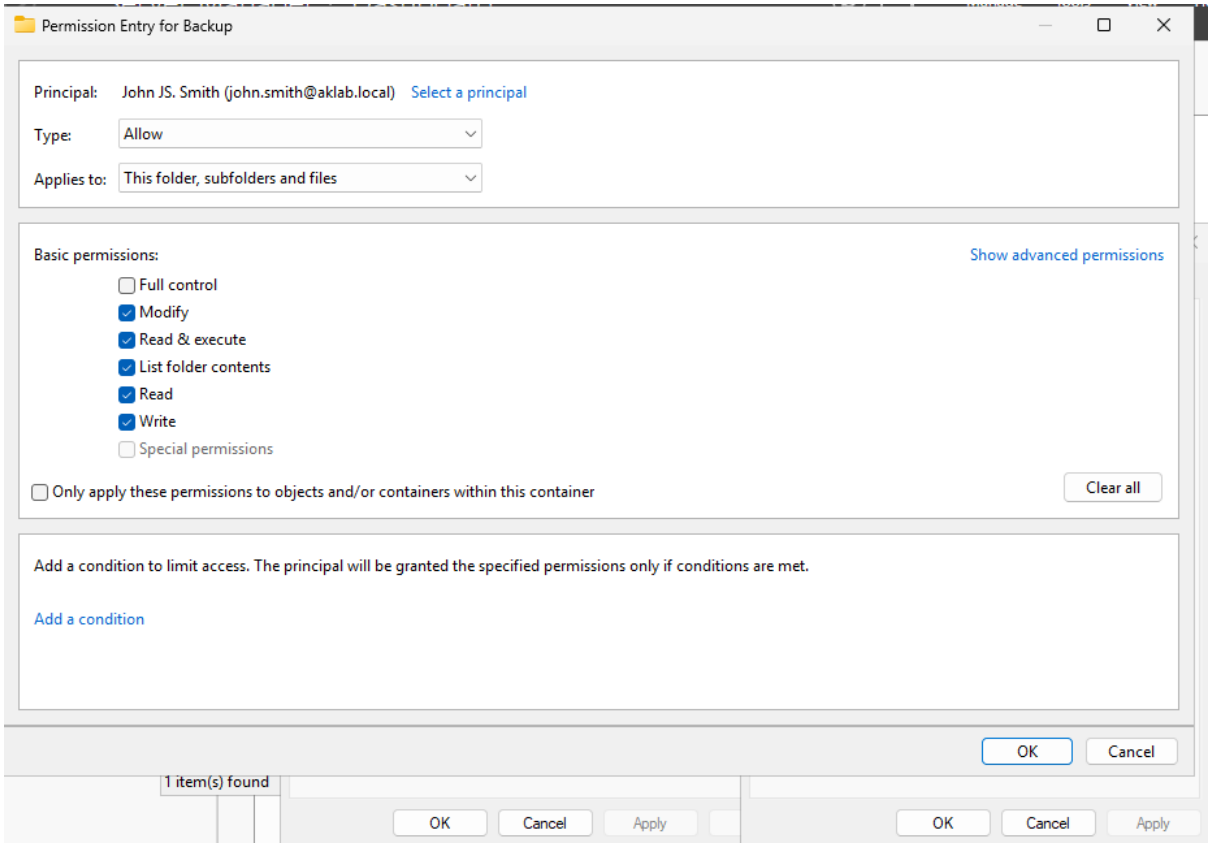

Figure 8: Setting up permissions for John Smith

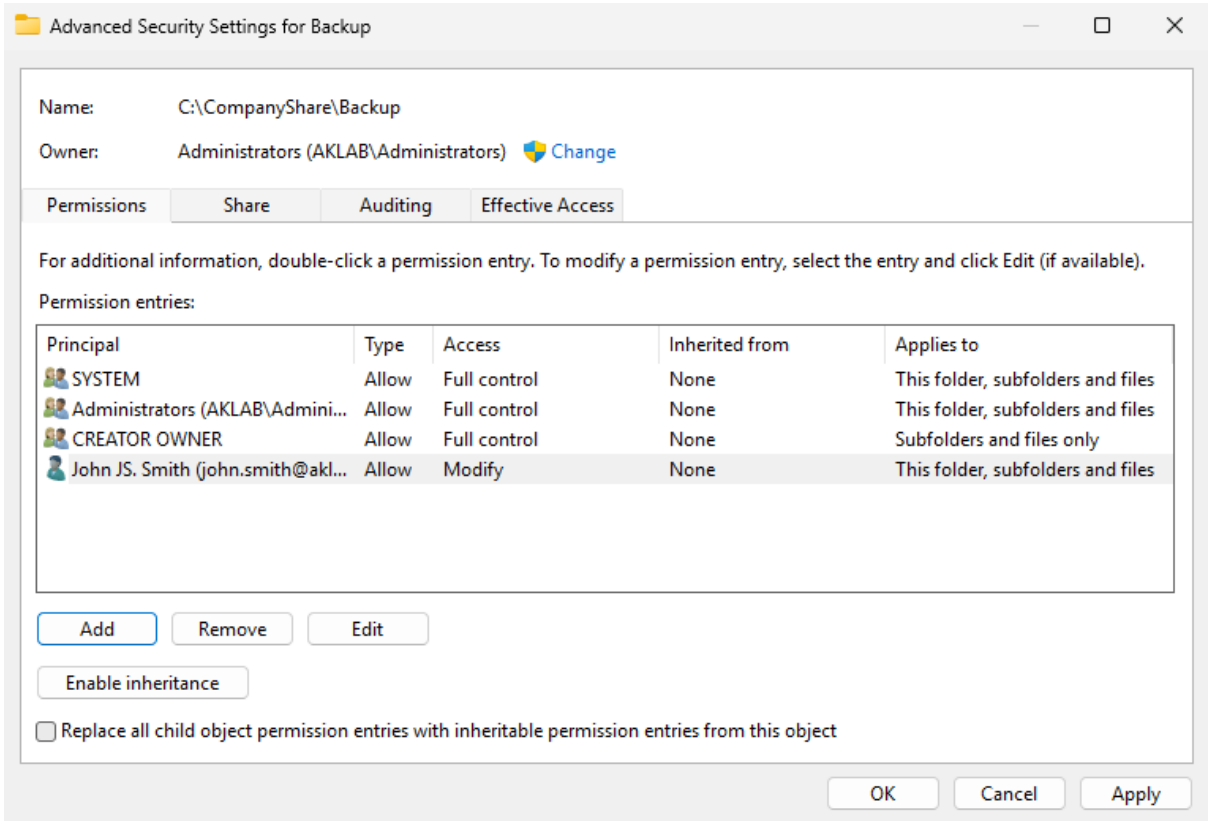

Figure 9: John Smith is successfully added to the folder security settings

4. Validation

Verifying if John Smith is able to access and make changes to the folder by remotely connecting to his desktop:

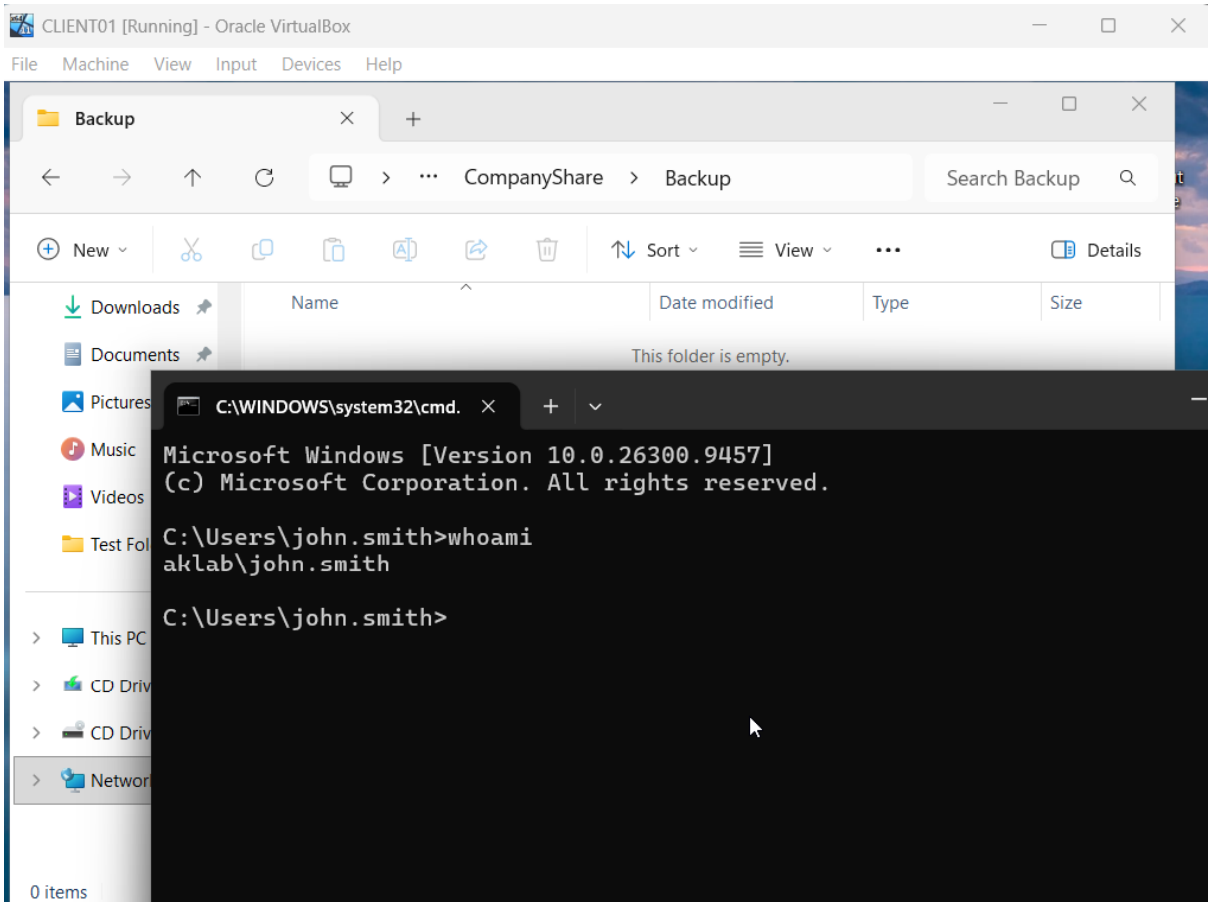

Figure 10: John Smith is able to access the folder

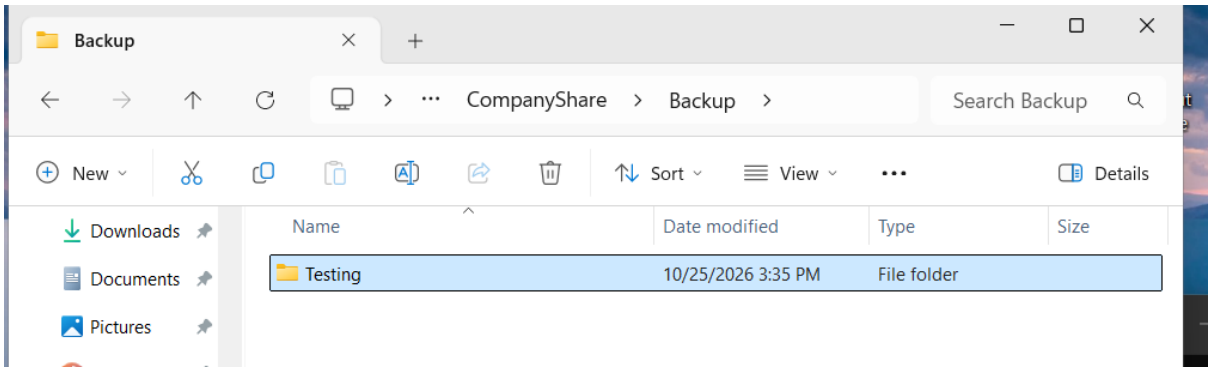

Figure 11: John Smith is able to create a folder

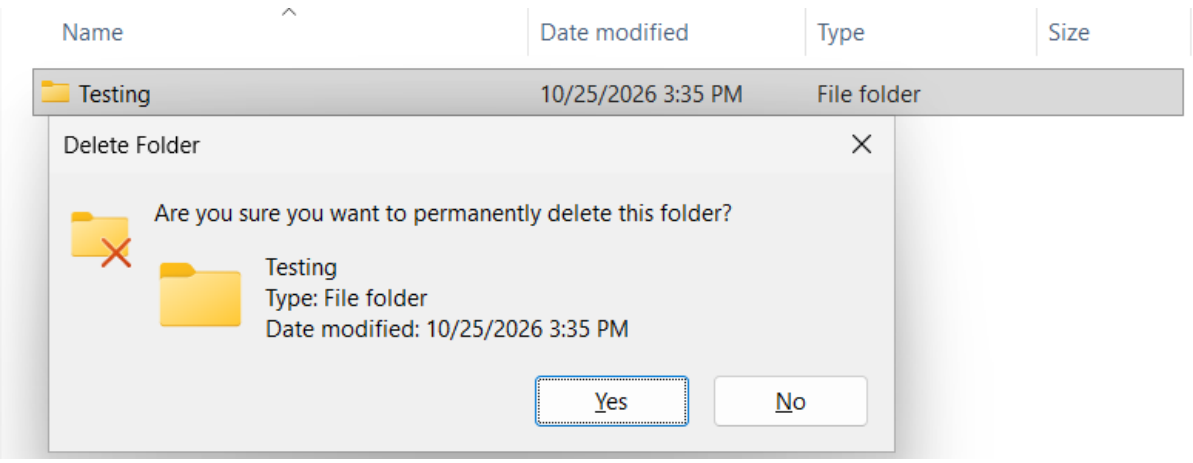

Figure 12: John Smith is able to delete the folder

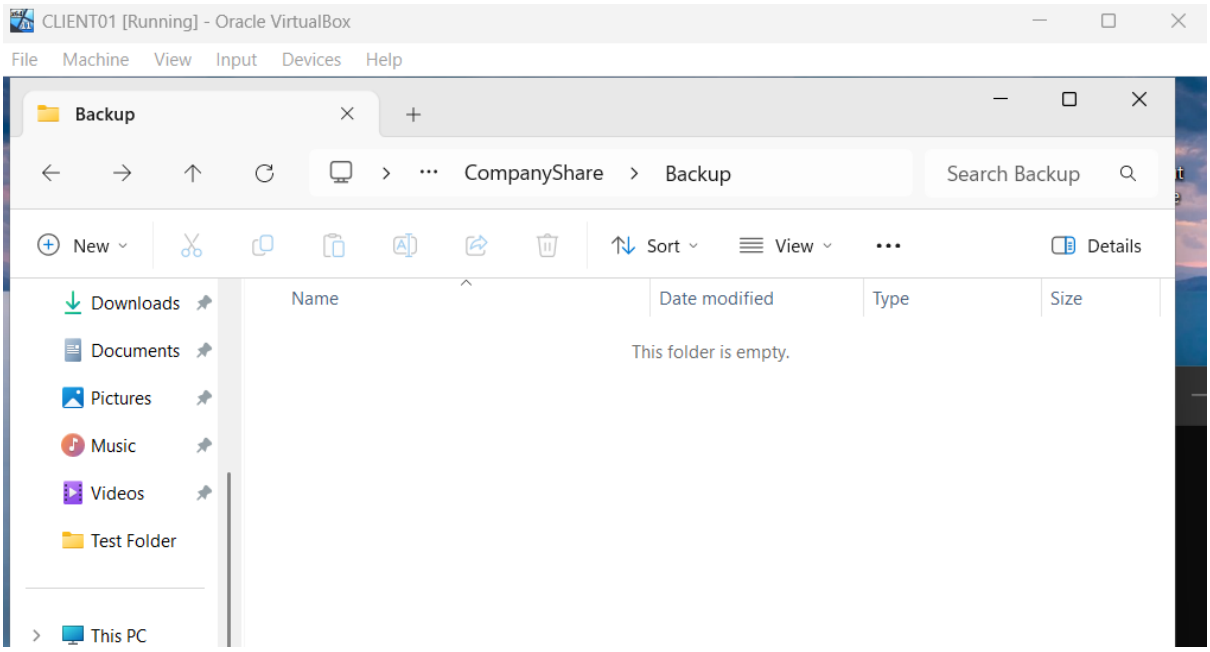

Figure 13: The folder Testing is successfully deleted

This shows that John Smith is able to make all the changes in the folder.

Ticket Resolved!
