Issue:

Software Installation

The IT Administrator has requested that 7-Zip, an approved file compression and extraction utility, be installed for both Marketing employees in the Active Directory environment.

The objective is to ensure that Marketing employees can use the same approved application without requiring separate manual installations for each user.

Environment: DC01 (domain controller) and CLIENT01 (Windows client)

1. Issue Description

The Marketing department requires 7-Zip to extract and manage compressed files. The administrator has requested that the application be installed and made available to both Olivia Martin and Ethan Clark on their authorized workstations.

Expected outcome: Both users can launch 7-Zip without requiring administrator credentials or installing the application separately under each user profile.

2. Environment

- User account: AKLAB\Administrator
- Shared resource: \\DC01\CompanyShare

3. Resolution

- Let’s install 7-Zip on CLIENT01:

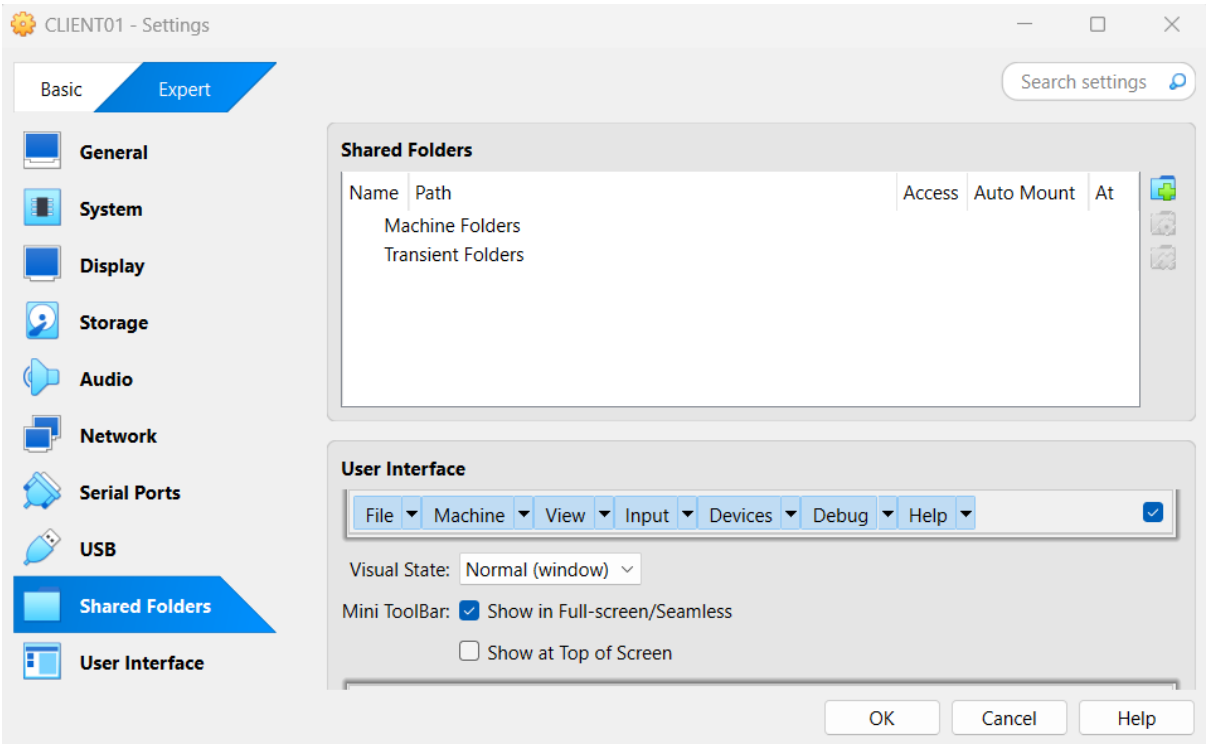

Figure 1: Adding the shared folder from the system

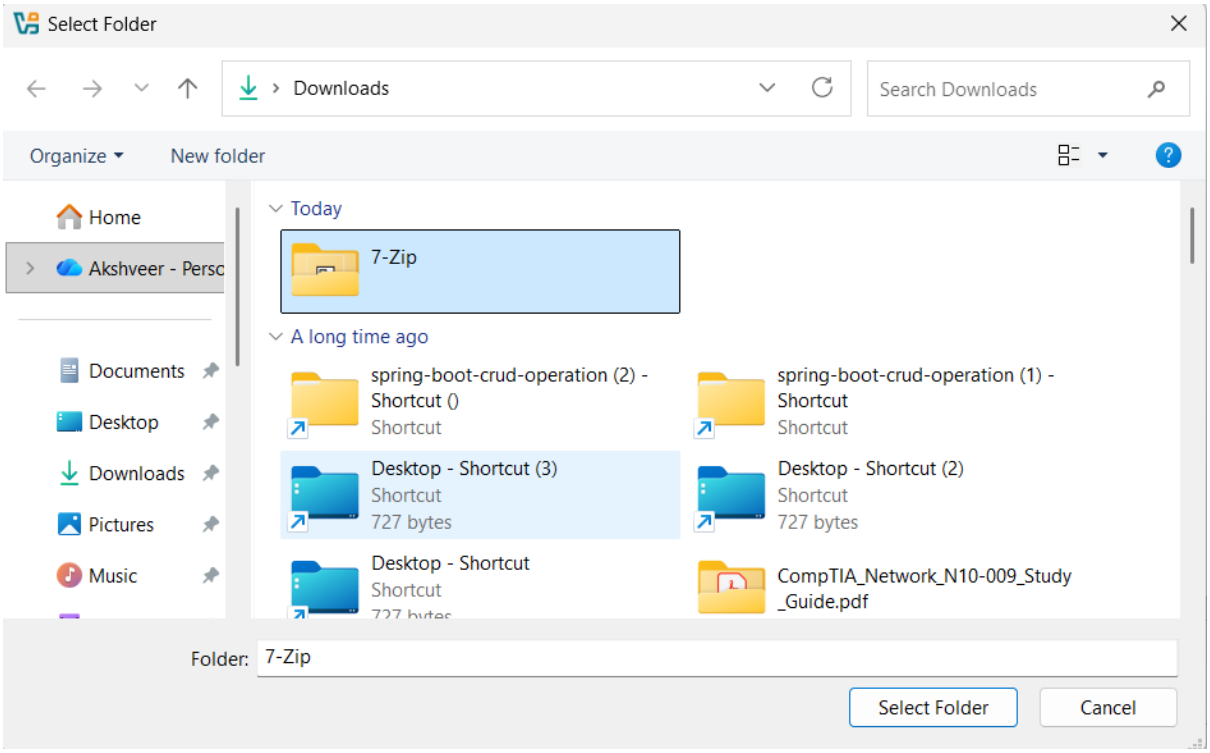

Figure 2: Selecting the folder where the .exe file is

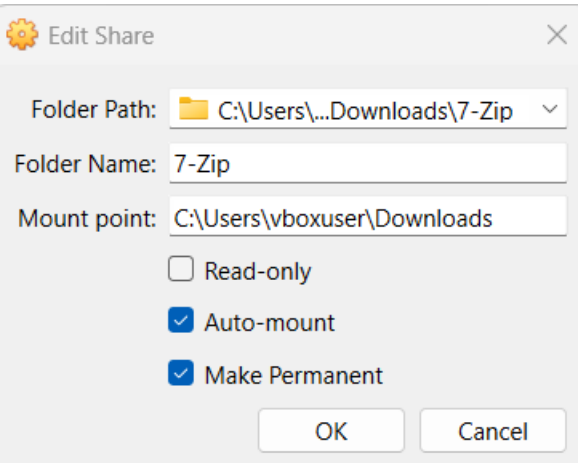

Figure 3: Checking the settings

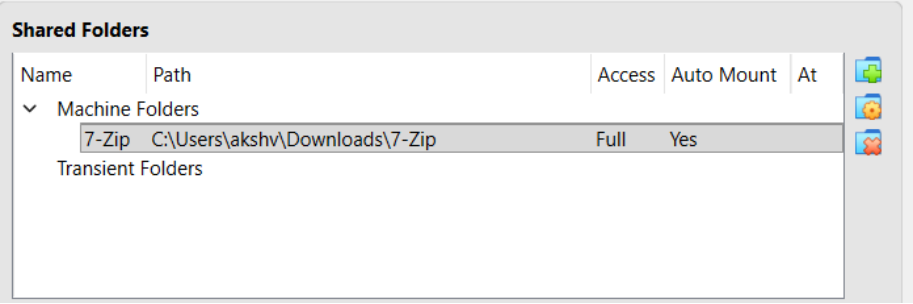

Figure 4: The folder is successfully added to the Shared Folder

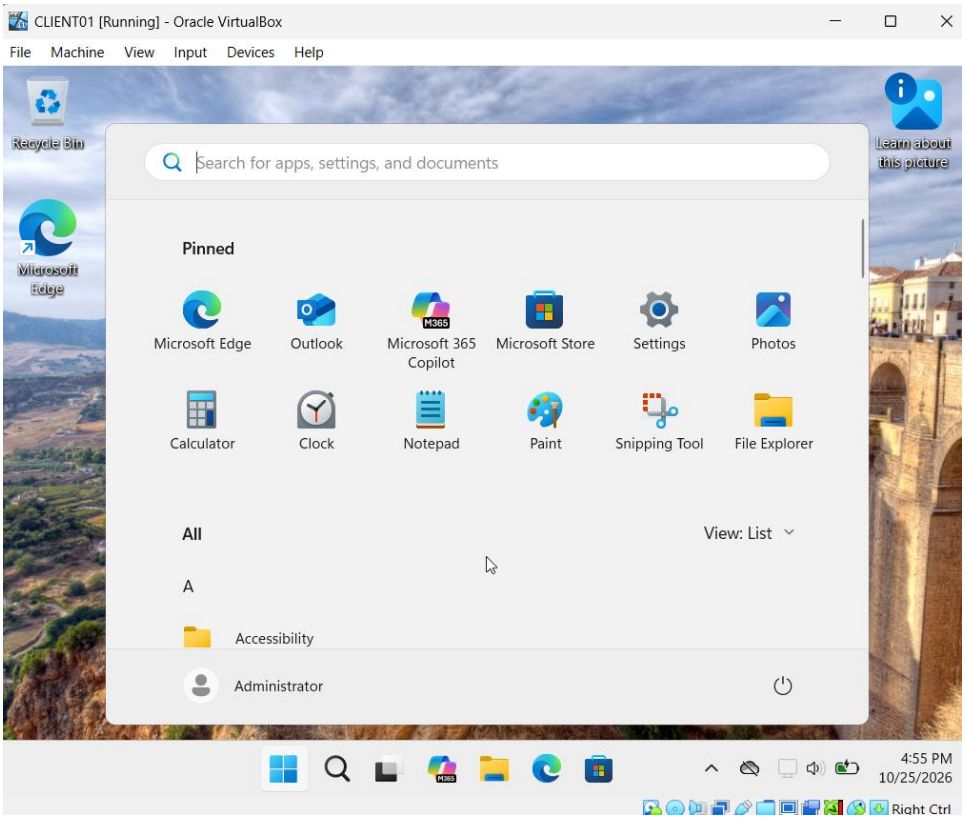

Figure 5: Signing in as Administrator on CLIENT01

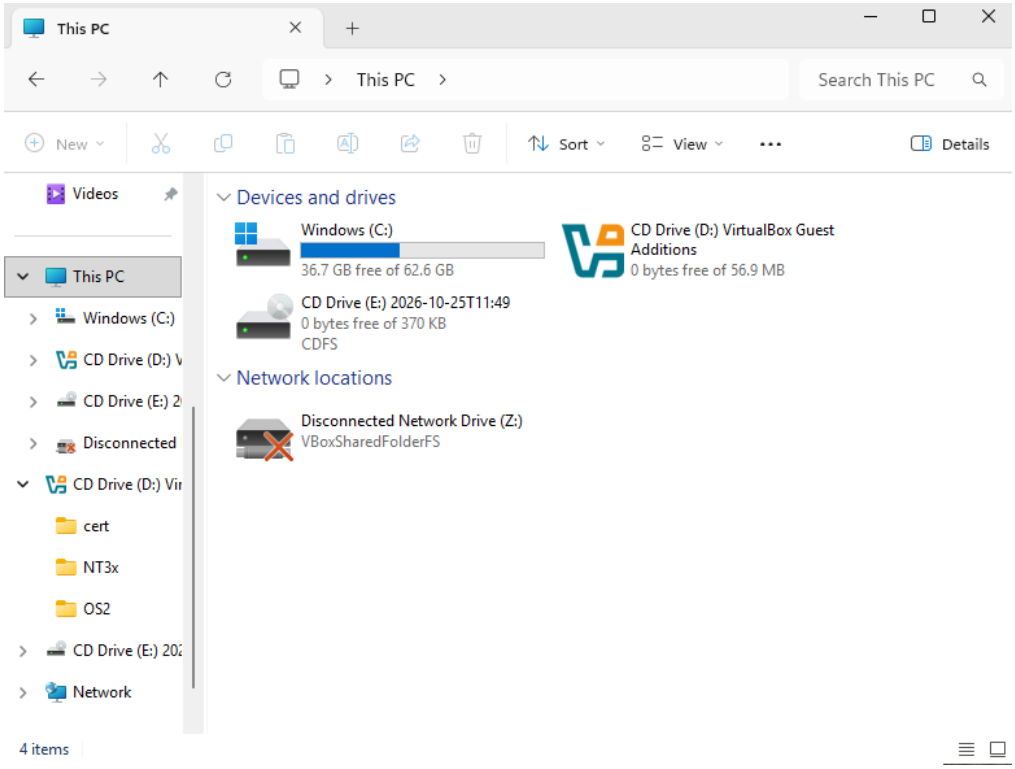

Figure 6: Found the drive

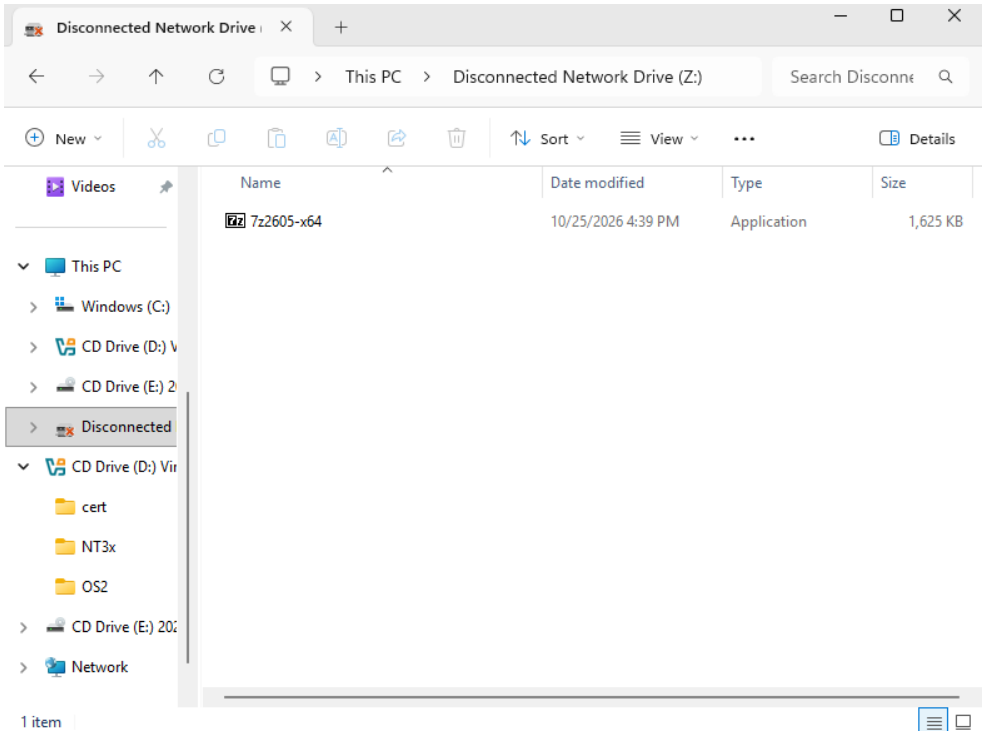

Figure 7: The .exe file is present inside the folder

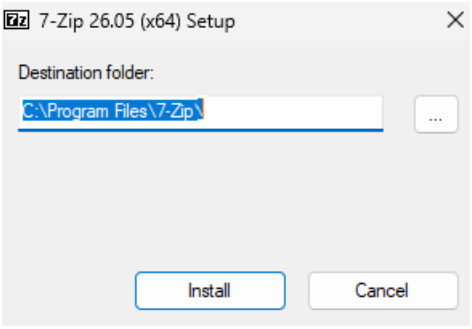

Figure 8: Selecting the location

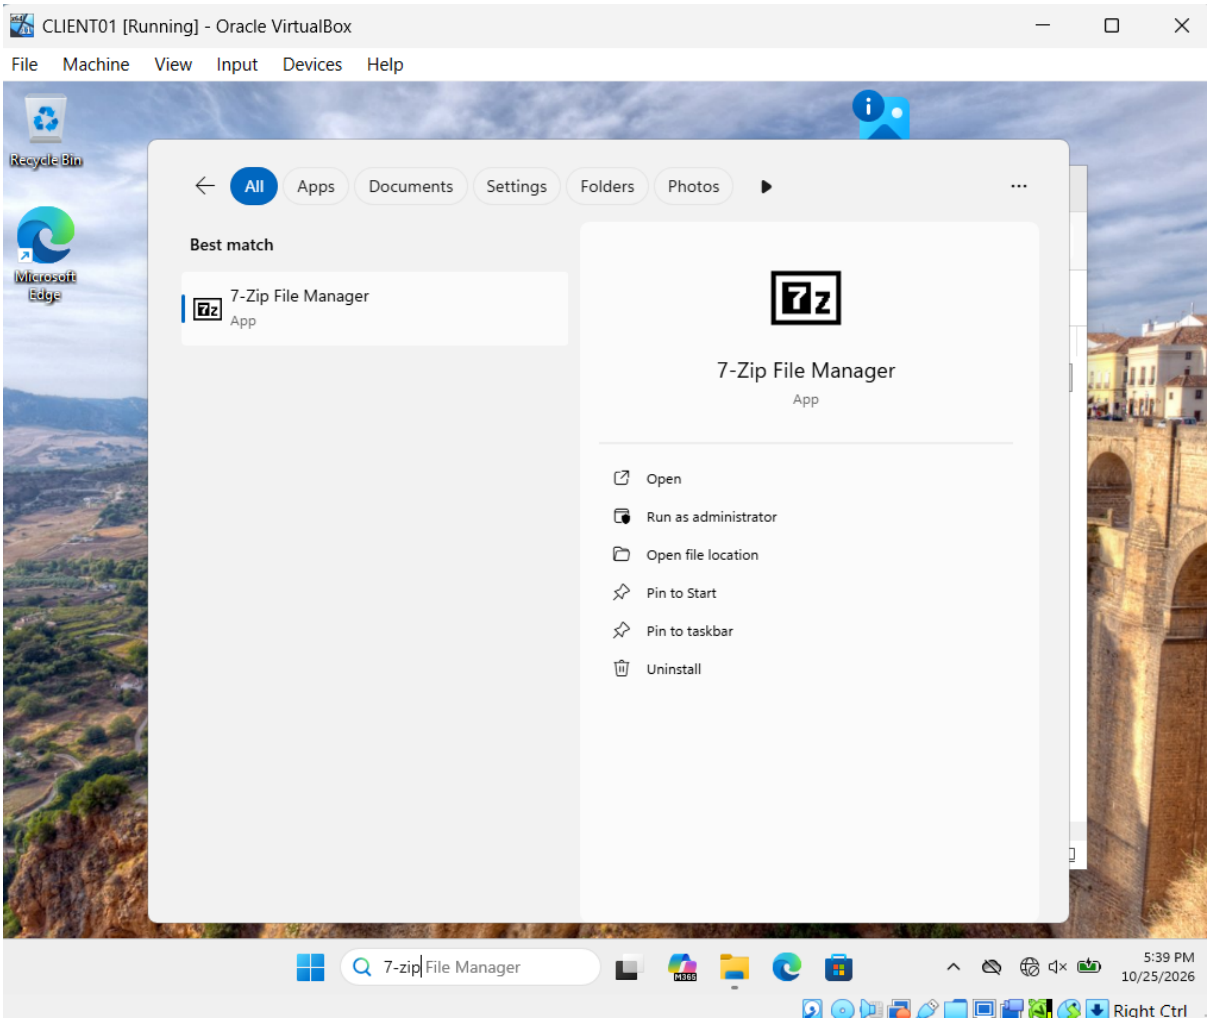

Figure 9: 7-Zip is successfully installed

Now, the v-box is present on the systems, and now the members of the Marketing group can install it on their systems.

4. Validation

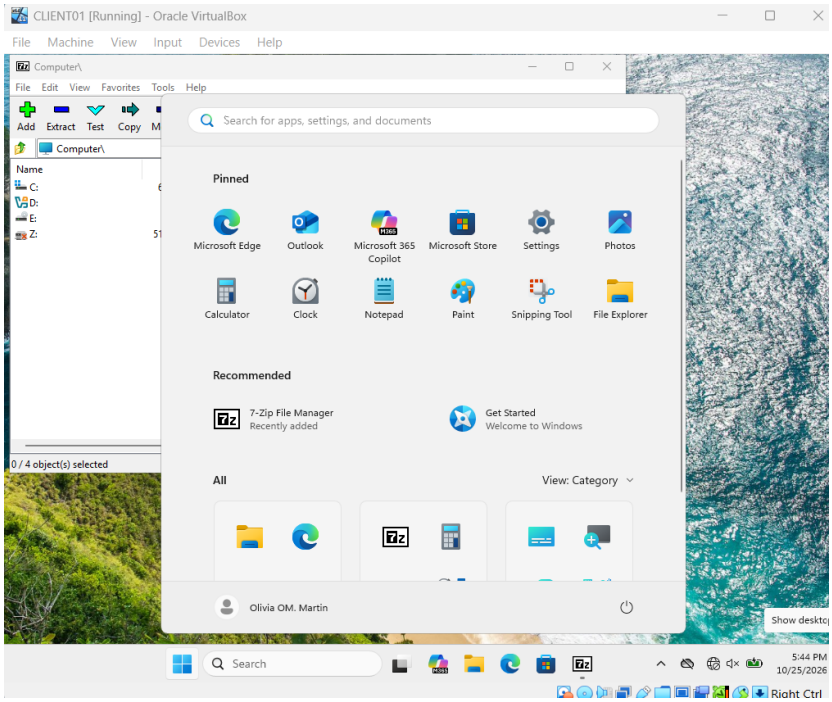

Figure 10: 7-Zip installed on Olivia Martin's account

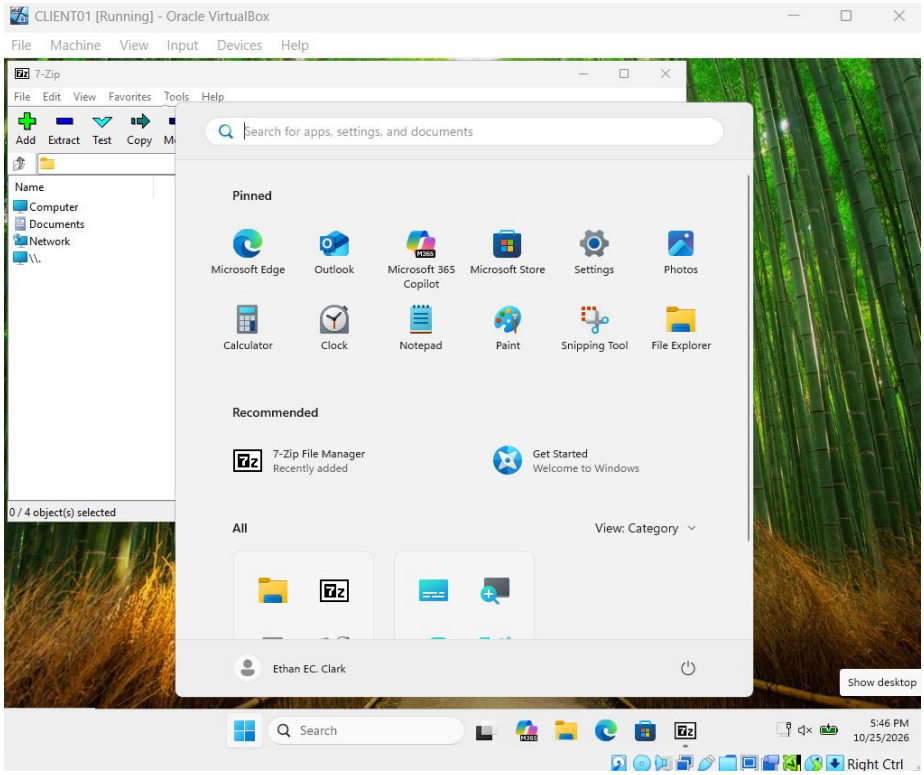

Figure 11: 7-Zip is installed on Ethan Clark's account

Ticket Resolved!
