Issue:

Assign a unique Employee ID to Jamie Taylor in Active Directory. Employee IDs help organizations identify employees accurately and maintain consistent employee records across departments.

Environment: DC01 (domain controller) and CLIENT01 (Windows client)

1. Issue Description

Assign an employee ID to Jamie Taylor as she is the only employee without an employee ID in the directory. Verify why this happened, and resolve the issue.

2. Environment

- User account: AKLAB\jamie.taylor
- Shared resource: \\DC01\CompanyShare\Employees

3. Investigation

- Checking the employees who are without Employee ID:

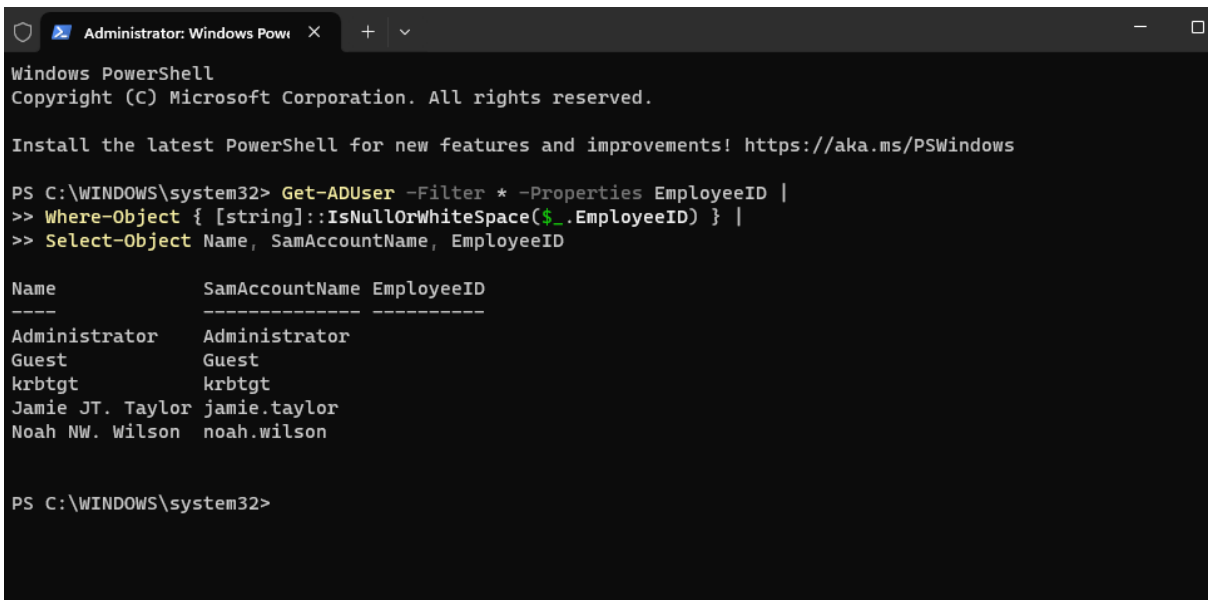

Figure 1: Employees without Employee ID

Code utilised:

```
Get-ADUser -Filter * -Properties EmployeeID |
Where-Object { [string]::IsNullOrWhiteSpace($_.EmployeeID) } |
Select-Object Name, SamAccountName, EmployeeID
```

4. Root Cause

As per the resources, when the employee IDs were assign, Jamie Taylor was on vacation and her account was disabled.

5. Resolution

Let's assign employee ID to Jamie Taylor:

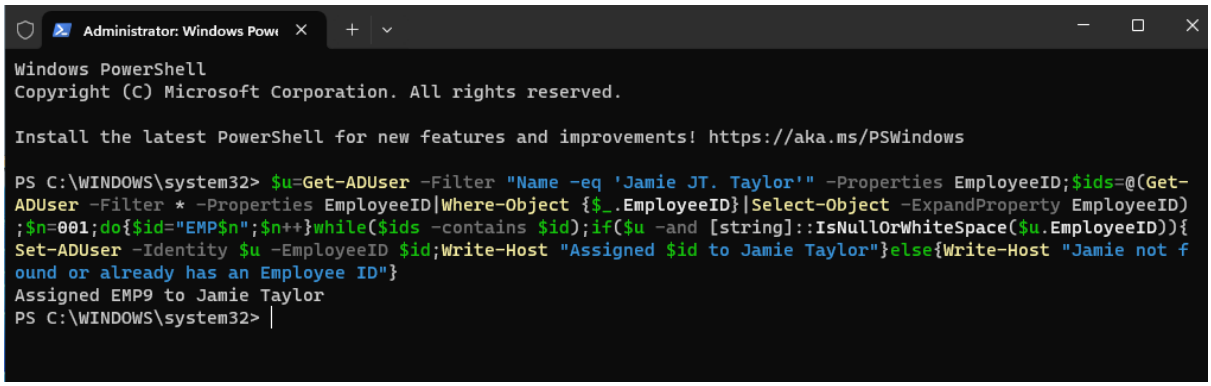

Figure 2: Assigned EmployeeID to Jamie JT. Taylor

Code Utilised:

```
$u=Get-ADUser -Filter "Name -eq 'Jamie JT. Taylor'" -Properties EmployeeID;$ids=@(Get-ADUser -Filter * -Properties EmployeeID|Where-Object {$_.EmployeeID}|Select-Object -ExpandProperty EmployeeID);$n=001;do{$id="EMP$n";$n++}while($ids -contains $id);if($u -and [string]::IsNullOrWhiteSpace($u.EmployeeID)){Set-ADUser -Identity $u -EmployeeID $id;Write-Host "Assigned $id to Jamie Taylor"}else{Write-Host "Jamie not found or already has an Employee ID"}
```

Use: The code looks for the name 'Jamie JT. Taylor', checks if the user has Employee ID, if the user is not found or already has Employee ID, it returns 'Jamie not found or already has an Employee ID', if no, it looks for the employee ID which is not assigned to other employees, starts the search from '001' and assign the unique Employee ID and returns 'Assigned EMP_' to Jamie Taylor'.

6. Validation

Verifying if Jamie JT. Taylor is assigned an employee ID and a unique one:

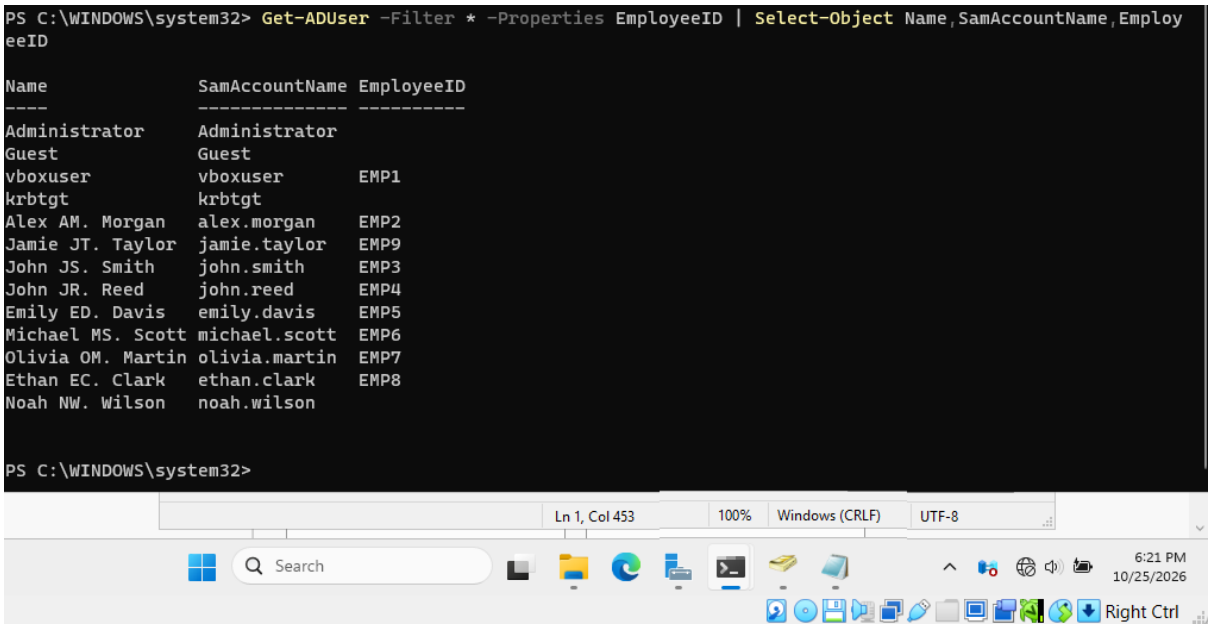

Figure 3: Employees with Employee ID

Code Utilised:

```
Get-ADUser -Filter * -Properties EmployeeID | Select-Object Name,SamAccountName,EmployeeID
```

We can see that Jamie JT. Taylor now has an Employee ID that is unique because it is not assigned to anyone else.

Ticket Resolved!
