Issue:

Configure Automated File Version History for Shared Folders

The IT department has requested an automated file version history solution for the shared folders hosted on DC01. Currently, Shadow Copies can be created manually; however, the administrator requires a scheduled process to ensure previous versions of files are regularly captured without manual intervention.

This will allow authorized employees to recover earlier versions of documents in the event of accidental modifications, overwrites, or deletions.

Environment: DC01 (domain controller) and CLIENT01 (Windows client)

1. Issue Description

Configure a shadow copy schedule for the volume hosting C:\CompanyShare

2. Environment

- User account: AKLAB\Administrator
- Shared resource: \\DC01\CompanyShare

3. Resolution

Setting up to schedule the shadow copying:

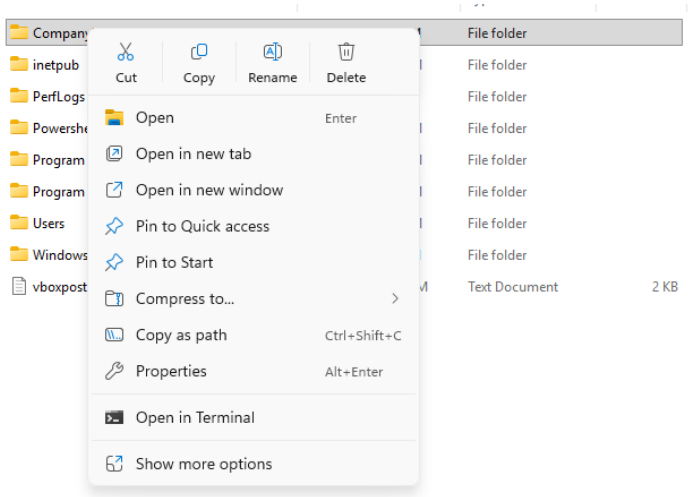

Figure 1: Setting up the Properties

The options are not available here, let’s try using Win + R.

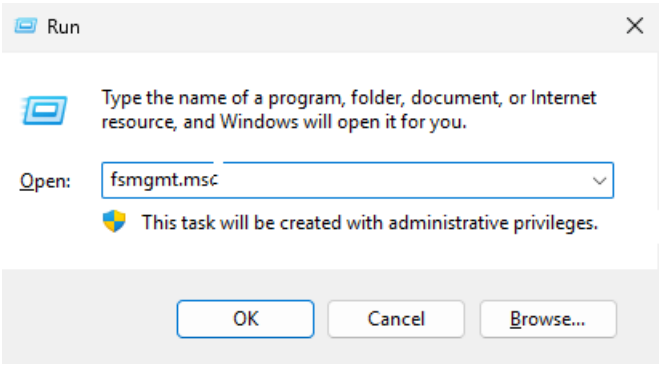

Figure 2: Running the following command

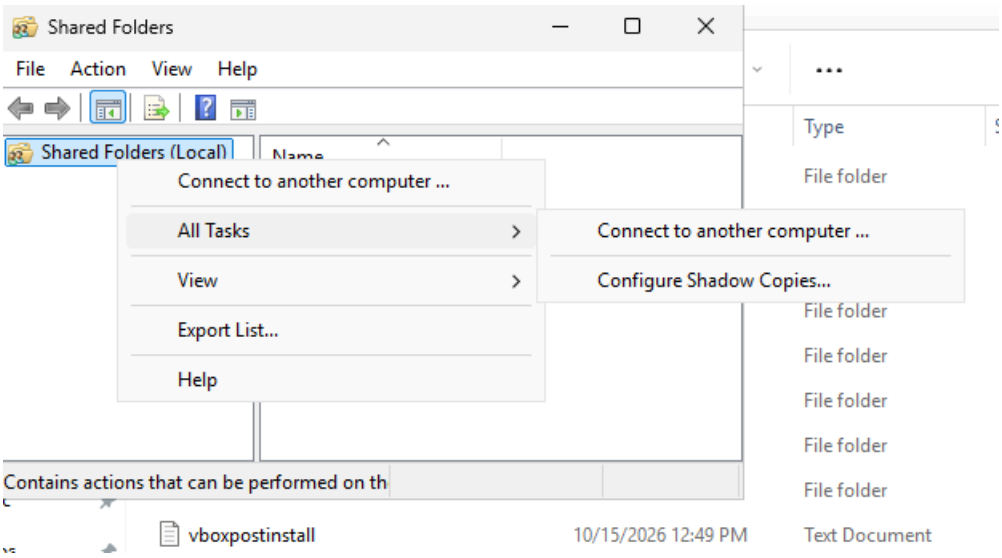

Figure 3: Configuring Shadow Copies

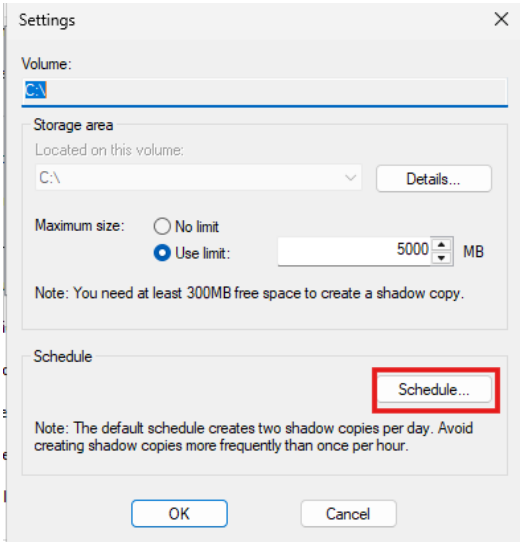

Figure 4: From the settings, configuring the scheduling

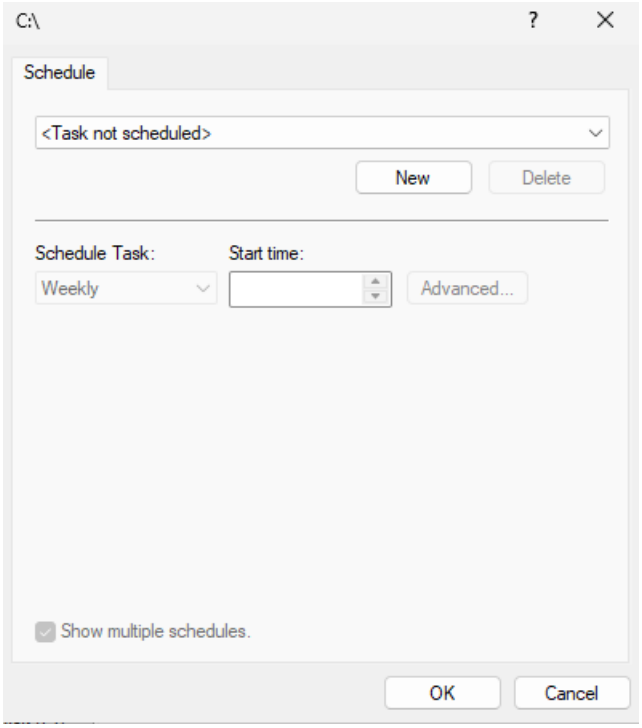

Figure 5: Scheduling a new task

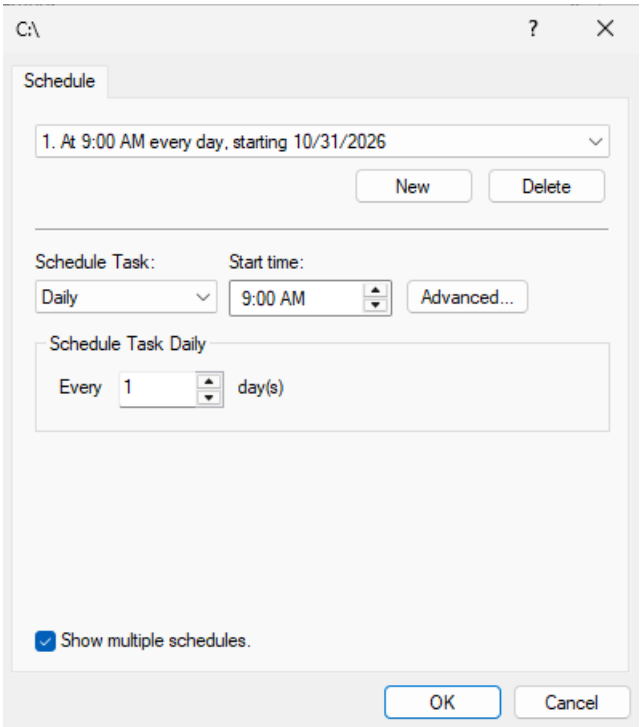

Figure 6: Setting 1st schedule to run at 9 am

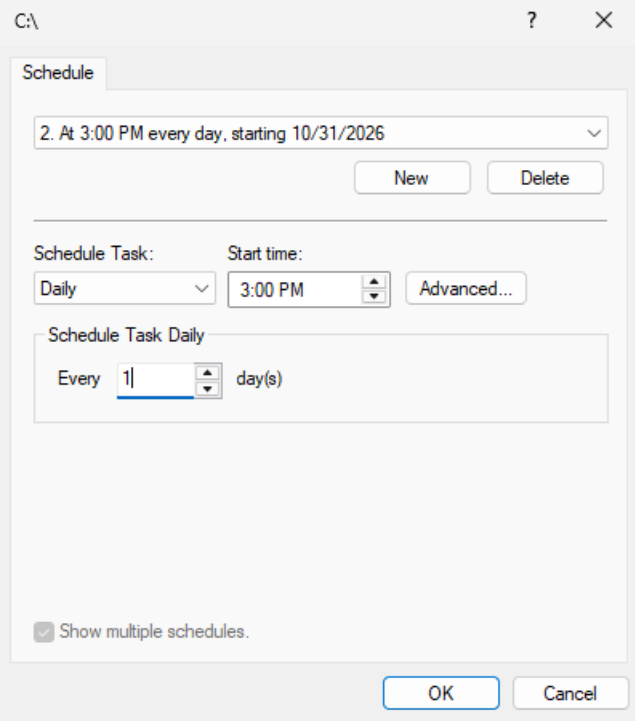

Figure 7: Setting 2nd schedule to run at 3 pm

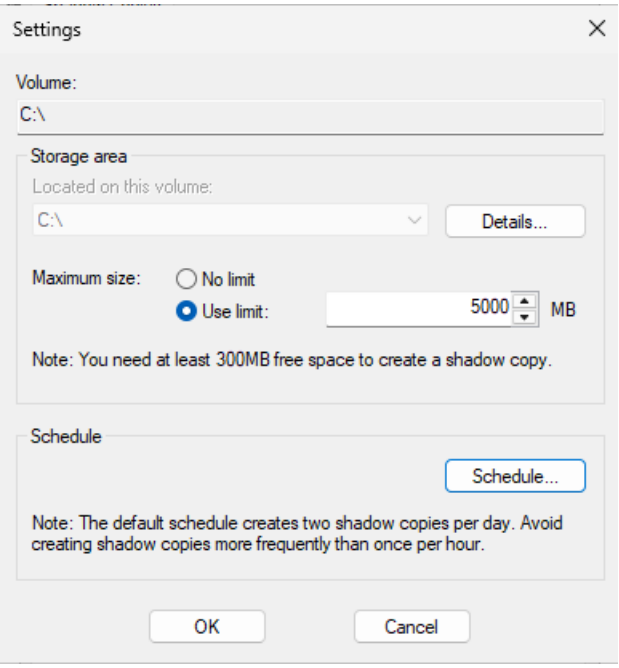

Figure 8: Checking OK

6. Validation

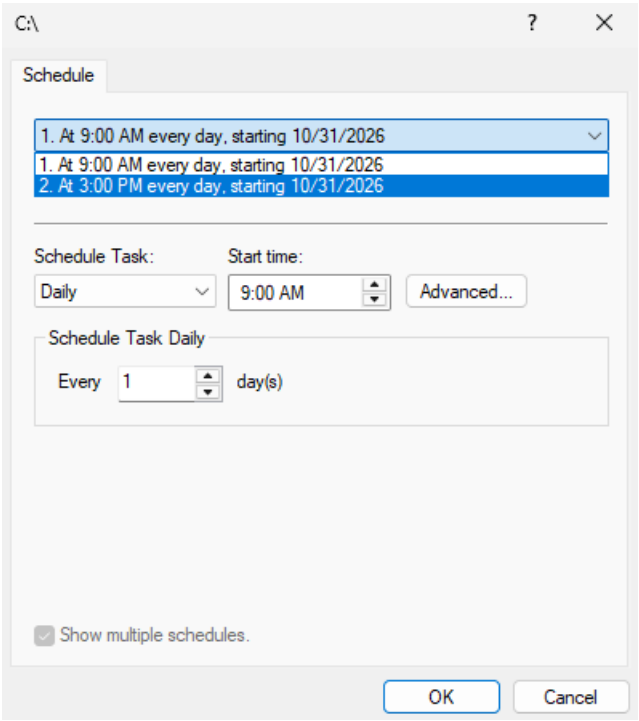

Figure 9: The shadow copies are sheduled to store version history twice a day

Ticket Resolved!
